Uncovered Air Dried	0%
Covered with Coverall 7 DAYS	26% Stronger
Covered with Coverall 28 DAYS	47% Stronger

Ref.: Design and Control of Concrete Mixtures, Chapter 12, Portland Cement Assoc.

Warp's White Poly-Cover® plastic sheeting can help maintain proper temperature in hot weather by reflecting the sun's hot rays.

All Warp's plastic sheeting retards moisture evaporation.

Warp's Poly-Cover® and Carry-Home® Coverall® plastic sheeting meet ASTM C171-69 and AASHTO M171-87 specifications.

Concrete Curing Facts:

- Curing concrete covered with Warp's Genuine Coverall makes stronger concrete
- Concrete does not harden by drying. In fact, concrete needs moisture to cure.
- The longer curing concrete remains moist, the stronger it becomes.
- Rapid moisture loss from new concrete can cause surface cracks.
- Concrete poured on top of Warp's Coverall makes stronger concrete.
- Moist curing is required by Building Codes: IBC 1905.11.1 (03), BOCA 1908.8 (99), and UBC 1905.11.1 (94).
- Polyethylene is required for dampproofing under basement floors and walls per Building Codes: IBC 1807.2.1 (03), BOCA 1813.3.1 (99), and UBC 1827.3 (94).
